DETAILED ACTION

This communication is responsive to amendment filed on August 30, 2004.

Applicant cancels claims 3, 6-7, 9-12, amends claims 1, 8.

Response to Applicant Remarks

1. Applicant's arguments, see pages 4-7, filed on August 30, 2004, with respect to amended claims 1 and 8 have been fully considered and are persuasive. The rejections of claims 1-12 have been withdrawn due to the amendment of the claims.

Allowable Subject Matter

2. Claims 1-2, 4-5, 8 are allowed.

The following is an Examiner's Statement of Reasons for Allowance: Claims 1-2, 4-5, 8 are allowable over the prior art of record because the Examiner found neither prior art cited in its entirety, nor based on the prior art, found any motivation to combine any of the said prior art which teaches:

a) A method of calibrating a color reproduction apparatus which has a process for converting received digital color signals to uniquely-associated drive code values and to then produce an image rendering with color densities corresponding to the drive code values comprising the steps of producing a calibration target having a plurality of color patches by using input code values which correspond to a sample of color densities, wherein one subset of the color pates is intended to have neutral color density values and another subset of the color

patches is intended to have non-neutral color density values deviating in their mix of red, green, and blue from each other; producing error signals characteristic of differences between measured color densities and intended color densities of the patches intended to have neutral density values and the patches intended to have non-neutral density values for adjusting the converting process of the reproduction apparatus as a function of the error signals.

b) A calibration system comprising at least one first patch with a neutral density code value, at least one second patch having a red code value which is deviated from its neutral value, at least one third patch having a green code value which is deviated from its neutral value, and at least one fourth patch having a blue code value which is deviated from its neutral value wherein for each neutral point of a designated set of neutral points along a neutral axis in a three-dimensional density space, selecting four non-neutral points such that the four non-neutral points sit on a common plane wherein the neutral axis is normal to the common plane, the common plane is further out on the neutral axis than the corresponding neutral point, and the four non-neutral points represent corners of a square in the common plane such that the square is centered on a point where the neutral axis intercepts the common plane.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
